

## **Software Engineering: Tutorial Sheet 2**

### **Software Engineering Tools**

For this tutorial exercise you are asked to use the WWW to discover information about either

**software quality assurance tools and organisations**

or

**software project management tools**

and to make a brief presentation to your tutorial group about one of them. Go to

[http://dmoz.org/Computers/Software/Software\\_Engineering](http://dmoz.org/Computers/Software/Software_Engineering),

and click on `Quality_Assurance`

and to

[http://dmoz.org/Computers/Software/Project\\_Management/](http://dmoz.org/Computers/Software/Project_Management/)

and browse these sites until you find a few software quality assurance tools and/or organisations and a few project management tools that interest you.

Each member of the tutorial group should present a different topic, so you will have to agree amongst yourselves and with your tutor, at a tutorial ahead of the one at which you make the presentations, about who will investigate which topic.

Note that many of the project management tools listed are designed for use in fields other than software engineering and are not appropriate for this exercise.
