PROFESSIONAL ISSUES
Setting the Agenda
MICHAEL FOURMAN
No man is an island...
• The social, economic, moral, and legal frameworks that shape the software ecosystem.

• Architectures, operating systems, programming languages, applications, companies and individuals rise and fall.

• Society guarantees some rights, and imposes many responsibilities and obligations.

• Non-technical forces will play a role in shaping what you can achieve.

• To understand some of these forces may be helpful.

Cloud use questioned over PRISM leaks

The rise of cloud computing – with millions of people storing data on servers in the United States – enabled vast amounts of personal data to be collected by the U.S. National Security Agency’s PRISM programme.

1. Internet user: Data travels through wire, fibre-optic networks, and undersea cables to telecom companies in United States
   - Email
   - Phone calls
   - Images
   - Video

2. Telecom company
   - Data routed to fibre-optic splitter

3. PRISM: Uses phone-billing software to analyse types of data sent – email, video, or voice traffic. PRISM said to handle 2.5 gigabits of data per second

4. NSA interception: Duplicates of all cloud traffic – emails, attachments, web pages and VoIP phone calls – routed to NSA
   - Including voice over internet protocol calls (VoIP)

PRISM allegedly used at between 10 and 20 secret centres since 2007

Introduction

U.S. as World’s Telecommunications Backbone

- Much of the world’s communications flow through the U.S.
- A target’s phone call, e-mail or chat will take the **cheapest** path, not the **physically most direct** path – you can’t always predict the path.
- Your target’s communications could easily be flowing into and through the U.S.
