

Computer Misuse Act 1990

Anti-hacking legislation

Background

- No laws specifically to deal with computer crime prior to 1990
- Other laws tried instead
- Examples.
 - Cox v Riley 1986 (Criminal Damage Act 1971)
 - R. v Whitely 1990 (Criminal Damage Act 1971)
 - R. v Gold and Another (Forgery and Counterfeiting Act 1981)

Background 2

- The case of *R. v Gold and Another* was highly publicised
- Defendant released on appeal
- Lead to Law Commission produced report
 - Report No.186, Computer Misuse
- Michael Colvin's (MP) Private Member's Bill
- This became the Computer Misuse Act 1990

Problems

- Original bill specifically aimed at hackers
- Many amendments during passage through parliament
- Eventual legislation very broad based, lost much of the original intent

Offences

- The Act specifies 3 offences
- In summary these are:-
 - Unauthorised Access
 - Unauthorised access with intent to commit another offence
 - Unauthorised modification of data

Penalties 1

- Unauthorised Access is called a *summary offence* and penalties are limited to
 - 6 months imprisonment
and/or
 - a maximum fine of £5000

Penalties 2

- The other two offences
 - Unauthorised access with intent...
 - Unauthorised modification ...
- Are more serious and carry jail terms of up to 5 years and unlimited fines

Examples 1

Scenario 1

- A student hacks into a college database to impress his friends - **unauthorised access**
- Later he decide to go in again, to alter his grades, but cannot find the correct file - **unauthorised access with intent...**
- A week later he succeeds and alters his grades - **unauthorised modification of data**

Examples 2

Scenario 2

- An employee who is about to be made redundant finds the Managing Director's password; logs into the computer system using this and looks at some confidential files - **unauthorised access**
- Having received his redundancy notice he goes back in to try and cause some damage but fails to do so - **unauthorised access with intent...**
- After asking a friend, he finds out how to delete files and wipes the main customer database - **unauthorised modification**

Problems

- While there has been a rise in hacking
 - more computers/Internet gives greater access
- Prosecution are rare and punishments small
 - Examples
 - Defendant causes firm to lose £36,000 - Fined £1,650; conditional discharge
 - Defendant destroys £30,000 worth of data - Fined £3000; 140 hours community service

Reasons

- Very complex
 - Offences difficult to prove
 - Evidence difficult to collect - firms do not co-operate with police
 - Firms embarrassed by hacking - particularly banks
 - Employees often simply sacked/demoted
 - Police lack expertise; time; money
 - Offence perceived as 'soft crime' no one injured/hurt

The Bedworth case

- This case in 1991 caused great concern and it was suggested that further prosecutions under the act would be unlikely to succeed
 - Defendant (and others) hacked into a variety of systems and caused damage
 - Defence stated that defendant 'addicted to computers' so could not help hacking
 - Not guilty verdict returned by jury

Current situation

- Hacking has increased both at hobby and professional levels
- A few high profile cases
- Offenders often in other countries with no equivalent legislation
- Some 'international task forces' set up but no real progress
- Current estimated costs of hacking - £5 billion per year world-wide

The End
