6. What would you say to students considering taking this course?

A well-designed course, regardless of your skill level (you just have to know which lectures to skip ;)). The project opportunity is great if you're motivated (like me).

Do as much extra work as possible - there is a lot of support, so use it.

I found the course very easy but I have done a lot of programming already.

If you have previous programming knowledge/interest- go for it! Even if you don't, the course is very enjoyable.

It's only really useful if you've never programmed before; existing OO programmers will find the course way too slow.

Like the Inf1-FP course it is hard work to understand all the basics of Java if you haven't done any other programming before. The lectures are not nearly enough to be able to do the tutorial exercises so it's completely up to you to use the given material and learn Java in your free time.

Make sure to have a ground understanding in OP design before starting.

The lecturer - Perdita Stevens- she is amazing! Got my interest into the subject during the first weeks, managed to get all things clear and funny during the lectures, and was always taking examples of the real life

too easy
