Relation composition

Definition

Let $R \subseteq B \times C$ and $S \subseteq A \times B$. The composition relation $(R \circ S) \subseteq A \times C$ is $\{(a, c) \mid \exists b \ (a, b) \in S \land (b, c) \in R\}$

Closure *R* is a relation on *A*:

- R^0 is the identity relation (ι_A)
- $R^{n+1} = R^n \circ R$
- $R^* = \bigcup_{n \ge 0} R^n$

Example: reachability in a graph

A (10) A (10)

• reflexive iff $\forall x \in A (x, x) \in R$

 R^* is the reflexive and transitive closure of R

A (1) A (1) A (1) A (1) A (1)

Definition

A relation *R* on a set *A* is an equivalence relation iff it is reflexive, symmetric and transitive

4 D K 4 B K 4 B K 4

Definition

A relation R on a set A is an equivalence relation iff it is reflexive, symmetric and transitive

• Let Σ^* be the set of strings over alphabet Σ . The relation $\{(s, t) \in \Sigma^* \times \Sigma^* \mid |s| = |t|\}$ is an equivalence relation

Definition

A relation R on a set A is an equivalence relation iff it is reflexive, symmetric and transitive

- Let Σ^* be the set of strings over alphabet Σ . The relation $\{(s, t) \in \Sigma^* \times \Sigma^* \mid |s| = |t|\}$ is an equivalence relation
- | on integers is not an equivalence relation.

Definition

A relation R on a set A is an equivalence relation iff it is reflexive, symmetric and transitive

- Let Σ^* be the set of strings over alphabet Σ . The relation $\{(s, t) \in \Sigma^* \times \Sigma^* \mid |s| = |t|\}$ is an equivalence relation
- | on integers is not an equivalence relation.
- For integer m > 1 the relation $\equiv \pmod{m}$ is an equivalence relation on integers

Equivalence classes

Definition Let *R* be an equivalence relation on a set *A* and $a \in A$. Let $[a]_R = \{s \mid (a, s) \in R\}$

be the equivalence class of a w.r.t. R

周レイモレイモ

Equivalence classes

DefinitionLet R be an equivalence relation on a set A and $a \in A$. Let $[a]_R = \{s \mid (a, s) \in R\}$ be the equivalence class of a w.r.t. R

If $b \in [a]_R$ then b is called a representative of the equivalence class

Theorem

Result

Let *R* be an equivalence relation on *A* and $a, b \in A$. The following three statements are equivalent

2
$$[a]_R = [b]_R$$

 $(a)_R \cap [b]_R \neq \emptyset$

A (10) A (10) A (10)

Theorem

Result

Let *R* be an equivalence relation on *A* and $a, b \in A$. The following three statements are equivalent

2
$$[a]_R = [b]_R$$

$$\textcircled{a}_R \cap [b]_R \neq \emptyset$$

Proof in book

A (10) A (10) A (10)

Partitions of a set

Definition

A partition of a set *A* is a collection of disjoint, nonempty subsets that have *A* as their union. In other words, the collection of subsets $A_i \subseteq A$ with $i \in I$ (where *I* is an index set) forms a partition of *A* iff

•
$$A_i \neq \emptyset$$
 for all $i \in I$
• $A_i \cap A_j = \emptyset$ for all $i \neq j \in I$
• $\bigcup_{i \in I} A_i = A$

Result

Theorem

- If R is an equivalence on A, then the equivalence classes of R form a partition of A
- 2 Conversely, given a partition $\{A_i \mid i \in I\}$ of *A* there exists an equivalence relation *R* that has exactly the sets $A_i, i \in I$, as its equivalence classes

Result

Theorem

- If R is an equivalence on A, then the equivalence classes of R form a partition of A
- ② Conversely, given a partition $\{A_i | i \in I\}$ of *A* there exists an equivalence relation *R* that has exactly the sets A_i , *i* ∈ *I*, as its equivalence classes

Proof in book

Sequences

Sequences are ordered lists of elements

2, 3, 5, 7, 11, 13, 17, 19, ... or a, b, c, d, ..., y, z

Sequences

Sequences are ordered lists of elements

2, 3, 5, 7, 11, 13, 17, 19, ... or a, b, c, d, ..., y, z

Definition

A sequence over a set *S* is a function *f* from a subset of the integers (typically \mathbb{N} or \mathbb{Z}^+) to the set *S*. If the domain of *f* is finite then the sequence is finite

周レイモレイモ

 $f: \mathbb{Z}^+ \to \mathbb{Q}$ is f(n) = 1/n defines the sequence

- Example $\{b_n\}_{n\in\mathbb{N}}$ with $b_n = 6(1/3)^n$
- An arithmetic progression is a sequence of the form

$$a, a + d, a + 2d, a + 3d, \ldots, a + nd, \ldots$$

• Example $\{c_n\}_{n\in\mathbb{N}}$ with $c_n = 7 - 3n$

• A geometric progression is a sequence of the form

$$a, ar, ar^2, ar^3, \ldots, ar^n, \ldots$$

- Example $\{b_n\}_{n\in\mathbb{N}}$ with $b_n = 6(1/3)^n$
- An arithmetic progression is a sequence of the form

$$a, a+d, a+2d, a+3d, \ldots, a+nd, \ldots$$

• Example $\{c_n\}_{n \in \mathbb{N}}$ with $c_n = 7 - 3n$ where the initial elements *a*, the common ratio *r* and the common difference *d* are real numbers

Recurrence relations

Definition

A recurrence relation for $\{a_n\}_{n \in \mathbb{N}}$ is an equation that expresses a_n in terms of one or more of the elements $a_0, a_1, \ldots, a_{n-1}$

A (10) A (10)

Recurrence relations

Definition

A recurrence relation for $\{a_n\}_{n\in\mathbb{N}}$ is an equation that expresses a_n in terms of one or more of the elements $a_0, a_1, \ldots, a_{n-1}$

 Typically the recurrence relation expresses a_n in terms of just a fixed number of previous elements (such as a_n = g(a_{n-1}, a_{n-2}))
Recurrence relations

Definition

A recurrence relation for $\{a_n\}_{n\in\mathbb{N}}$ is an equation that expresses a_n in terms of one or more of the elements $a_0, a_1, \ldots, a_{n-1}$

- Typically the recurrence relation expresses a_n in terms of just a fixed number of previous elements (such as a_n = g(a_{n-1}, a_{n-2}))
- The initial conditions specify the first elements of the sequence, before the recurrence relation applies

Recurrence relations

Definition

A recurrence relation for $\{a_n\}_{n \in \mathbb{N}}$ is an equation that expresses a_n in terms of one or more of the elements $a_0, a_1, \ldots, a_{n-1}$

- Typically the recurrence relation expresses a_n in terms of just a fixed number of previous elements (such as a_n = g(a_{n-1}, a_{n-2}))
- The initial conditions specify the first elements of the sequence, before the recurrence relation applies
- A sequence is called a solution of a recurrence relation iff its terms satisfy the recurrence relation

A pair of rabbits is placed on an island

A (1) > A (2) > A

A pair of rabbits is placed on an island

It takes 2 months for a pair of rabbits to mature. Once mature each pair of rabbits produces a new pair of rabbits each month.

A pair of rabbits is placed on an island

It takes 2 months for a pair of rabbits to mature. Once mature each pair of rabbits produces a new pair of rabbits each month.

Find a recurrence relation for number of pairs of rabbits after $n \in \mathbb{Z}^+$ months assuming no rabbits die

A pair of rabbits is placed on an island

It takes 2 months for a pair of rabbits to mature. Once mature each pair of rabbits produces a new pair of rabbits each month.

Find a recurrence relation for number of pairs of rabbits after $n \in \mathbb{Z}^+$ months assuming no rabbits die

Answer is the Fibonacci sequence

$$\begin{cases} f(1) = 1 \\ f(2) = 1 \\ f(n) = f(n-1) + f(n-2) & \text{for } n > 2 \end{cases}$$

A pair of rabbits is placed on an island

It takes 2 months for a pair of rabbits to mature. Once mature each pair of rabbits produces a new pair of rabbits each month.

Find a recurrence relation for number of pairs of rabbits after $n \in \mathbb{Z}^+$ months assuming no rabbits die

Answer is the Fibonacci sequence

$$\begin{cases} f(1) = 1 \\ f(2) = 1 \\ f(n) = f(n-1) + f(n-2) & \text{for } n > 2 \end{cases}$$

Yields the sequence 1, 1, 2, 3, 5, 8, 13, ...

• Finding a formula for the *n*th term of the sequence generated by a recurrence relation is called solving the recurrence relation

- Finding a formula for the *n*th term of the sequence generated by a recurrence relation is called solving the recurrence relation
- Such a formula is called a closed formula

- Finding a formula for the *n*th term of the sequence generated by a recurrence relation is called solving the recurrence relation
- Such a formula is called a closed formula
- Various more advanced methods for solving recurrence relations are covered in Chapter 8 of the book (not part of this course)

- Finding a formula for the *n*th term of the sequence generated by a recurrence relation is called solving the recurrence relation
- Such a formula is called a closed formula
- Various more advanced methods for solving recurrence relations are covered in Chapter 8 of the book (not part of this course)
- Here we illustrate by example the method of iteration in which we need to guess the formula

- Finding a formula for the *n*th term of the sequence generated by a recurrence relation is called solving the recurrence relation
- Such a formula is called a closed formula
- Various more advanced methods for solving recurrence relations are covered in Chapter 8 of the book (not part of this course)
- Here we illustrate by example the method of iteration in which we need to guess the formula
- The guess can be proved correct by the method of induction (to be covered)

2^n	2, 4, 8, 16, 32, 64, 128, 256, 512, 1024,	
3 ⁿ	$3, 9, 27, 81, 243, 729, 2187, 6561, 19683, 59049, \ldots$	
n!	$1, 2, 6, 24, 120, 720, 5040, 40320, 362880, 3628800, \ldots$	
f_n	1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89,	

Summations

Given a sequence $\{a_n\}$, the sum of terms $a_m, a_{m+1}, \ldots, a_\ell$ is

 $a_m + a_{m+1} + \ldots + a_\ell$

イロト イポト イヨト イヨト

Summations

Given a sequence $\{a_n\}$, the sum of terms $a_m, a_{m+1}, \ldots, a_\ell$ is

$$a_m + a_{m+1} + \ldots + a_\ell$$

< 日 > < 同 > < 回 > < 回 > < □ > <

Summations

Given a sequence $\{a_n\}$, the sum of terms $a_m, a_{m+1}, \ldots, a_\ell$ is

$$a_m + a_{m+1} + \ldots + a_\ell$$

The variable *j* is called the index of summation

More generally for an index set S

$$\sum_{j\in S} a_j$$

周レイモレイモ

Useful summation formulas

TABLE 2 Some Useful Summation Formulae.		
Sum	Closed Form	
$\sum_{k=0}^{n} ar^k \ (r \neq 0)$	$\frac{ar^{n+1}-a}{r-1}, r \neq 1$	
$\sum_{k=1}^{n} k$	$\frac{n(n+1)}{2}$	
$\sum_{k=1}^{n} k^2$	$\frac{n(n+1)(2n+1)}{6}$	
$\sum_{k=1}^{n} k^3$	$\frac{n^2(n+1)^2}{4}$	
$\sum_{k=0}^{\infty} x^k, x < 1$	$\frac{1}{1-x}$	
$\sum_{k=1}^{\infty} k x^{k-1}, x < 1$	$\frac{1}{(1-x)^2}$	

A (1) > A (2) > A

Products

Given a sequence $\{a_n\}$, the product of terms a_m , a_{m+1} , ..., a_ℓ is

 $a_m \cdot a_{m+1} \cdot \ldots \cdot a_\ell$

More generally for a finite index set S one writes

 $\prod_{j\in S} a_j$
