

# Review of Informatics 1 Computation & Logic

**Basics for the exam**

# Truth Tables

---

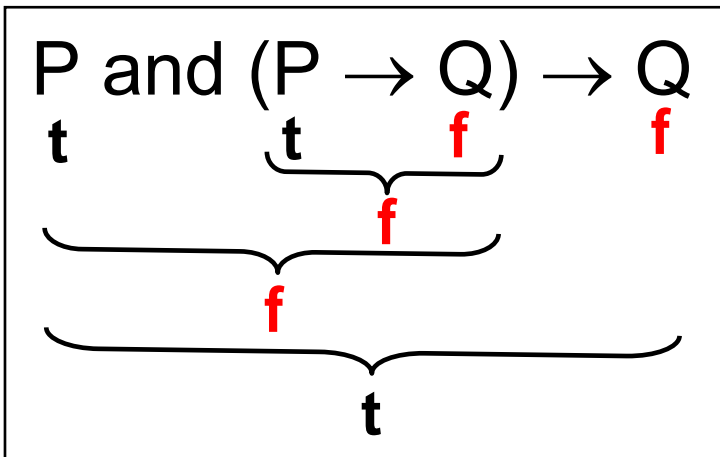

P	Q	not(P)	P and Q	P or Q	$P \rightarrow Q$	$P \leftrightarrow Q$
t	t	f	t	t	t	t
t	f	f	f	t	f	f
f	t	t	f	t	t	f
f	f	t	f	f	t	t

# Contingencies

# Tautologies

# Typical Problem

equivalent ?

$\text{not}(i1) \text{ or } i2$

equivalent ?

$\text{not}(i1 \text{ and } \text{not}(i2))$

# Proof Rules

Proof	Sub-proofs
$F \vdash A$	$A \in F$
$F \vdash A \text{ and } B$	$F \vdash A \quad F \vdash B$
$F \vdash A \text{ or } B$	$F \vdash A$
$F \vdash A \text{ or } B$	$F \vdash B$
$F \vdash C$	$A \text{ or } B \in F \quad [A F] \vdash C \quad [B F] \vdash C$
$F \vdash B$	$A \rightarrow B \in F \quad F \vdash A$
$F \vdash A \rightarrow B$	$[A F] \vdash B$

# Proof Rules for Negation

Proof	Sub-proofs
$F \vdash A$	$F \vdash \text{false}$
$F \vdash \text{not}(A)$	$[A/F] \vdash \text{false}$
$F \vdash B$	$\text{not}(A) \in F \quad \vdots \quad F \vdash A$
$F \vdash A$	$F \vdash \text{not}(\text{not}(A))$

The purpose of these rules is to provide positive evidence that an expression is false.

# Negation as Failure

---

Replace all the previous negation rules with:

Proof	Sub-proofs
$F \vdash \text{not}(A)$	$F \not\vdash A$

Where  $F \not\vdash A$  means a proof can't be found for  $A$  from  $F$

This makes the closed world assumption that  $F$  contains all the axioms pertinent to the problem and that the proof search is complete.

# Normal Forms

---

It is not strictly necessary to use all the logical operators. For example:

$A \rightarrow B$  is equivalent to  $\text{not}(A) \text{ or } B$   
 $A \rightarrow B$  is equivalent to  $\text{not}(A \text{ and } \text{not}(B))$   
 $A \text{ or } B$  is equivalent to  $\text{not}(\text{not}(A) \text{ and } \text{not}(B))$   
and so on....

We can use this to convert any expression into  
An equivalent one with fewer operator types.

# Conversion to Clausal Form

---

$(a \text{ and } \text{not}(b) \rightarrow c) \text{ and } a \text{ and } \text{not}(c)$

$P \rightarrow Q$  equivalent to  $\text{not}(P) \text{ or } Q$

$(\text{not}(a \text{ and } \text{not}(b)) \text{ or } c) \text{ and } a \text{ and } \text{not}(c)$

$\text{not}(P \text{ and } Q)$  equivalent to  $\text{not}(P) \text{ or } \text{not}(Q)$

$(\text{not}(a) \text{ or } \text{not}(\text{not}(b)) \text{ or } c) \text{ and } a \text{ and } \text{not}(c)$

$\text{not}(\text{not}(P))$  equivalent to  $P$

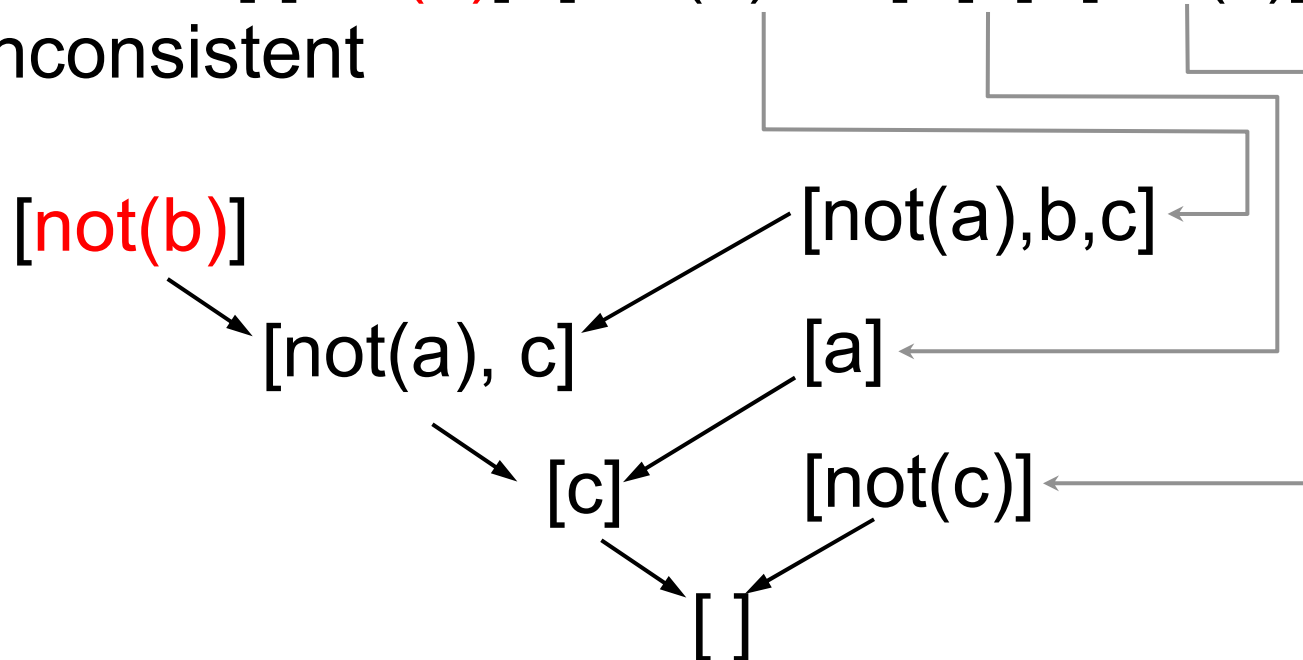

$(\text{not}(a) \text{ or } b \text{ or } c) \text{ and } a \text{ and } \text{not}(c)$

$(P \text{ or } \dots) \text{ and } \dots$  to  $[[P, \dots], \dots]$

$[[\text{not}(a), b, c], [a], [\text{not}(c)]]$

# A Resolution Proof

To prove  $b$  from  $[ \text{not}(a), b, c ], [ a ], [ \text{not}(c) ]$   
show that  $[ \text{not}(b), [ \text{not}(a), b, c ], [ a ], [ \text{not}(c) ]$   
is inconsistent

# Temporal Proof Rules

Proof	Sub-proofs
$(S, J) \vdash A$	$\text{access}(J, S, F) \quad F \vdash A$
$(S, J) \vdash A \text{ and } B$	$(S, J) \vdash A \quad (S, J) \vdash B$
$(S, J) \vdash A \text{ or } B$	$(S, J) \vdash A$
$(S, J) \vdash A \text{ or } B$	$(S, J) \vdash B$
$(S, J) \vdash \text{not}(A)$	$(S, J) \not\vdash A$
$(S, J) \vdash \text{next}(A)$	$(S, J+1) \vdash A$
$(S, J) \vdash \text{prev}(A)$	$(S, J-1) \vdash A$
$(S, J) \vdash \text{e\_future}(A)$	$(S, K) \vdash A \text{ for some } K > J$
$(S, J) \vdash \text{e\_past}(A)$	$(S, K) \vdash B \text{ for some } K < J$
$(S, J) \vdash \text{a\_future}(A)$	$(S, K) \vdash A \text{ for all } K > J$
$(S, J) \vdash \text{a\_past}(A)$	$(S, K) \vdash A \text{ for all } K < J$

# Half of Kleene's Theorem

---

For every regular expression we can build a FSM to accept the language defined by it.

# Limits of FSMs and Regular Expressions

---

Some languages can't be defined by FSMs or regular expressions - languages that require us to count up to arbitrarily high numbers for example.

# Probabilistic FSMs

# Practical Things to Practice

---

- **Describing simple problems in logic (see problems tackled in each logic lecture)**
- **Describing simple systems as FSMs (see system engineering half of 6<sup>th</sup> computation lecture)**
