

the university of edinburgh

These notes are intended to give a summary of relevant concepts from the lectures which are helpful to complete the tutorial sheet. It is not intended to cover the lectures thoroughly. Learning this content is not a replacement for working through the lecture material and the tutorial sheet.

**Topological ordering**  $(x_1, \ldots, x_d)$  — For all  $x_i, x_j$  connected by a directed edge  $x_i \to x_j$ ,  $x_i$  should appear before  $x_j$  in the ordering

**Ordered Markov property** — This is satisfied if  $\forall x_i \exists \pi_i \text{ s.t. } x_i \perp \text{pre}_i \setminus \pi_i \mid \pi_i \text{ where,}$ 

- $\operatorname{pre}_i$  is the set of nodes before  $x_i$  in a topological ordering
- $\pi_i$  is a minimal subset of  $\text{pre}_i$

For example, in graphs  $\pi_i = parents_i$ 

## DAG connections

Connection	Serial	Diverging	Converging
Graph	$x \longrightarrow z \longrightarrow y$	$x \leftarrow z \rightarrow y$	$x \longrightarrow z \longleftarrow y$
p(x,y)	$x \not\!\!\perp y -  ext{trail active}$	$x \not\!\!\perp y - \text{trail active}$	$x \perp\!\!\!\perp y$ – trail blocked
p(x, y z)	$x \perp \!\!\!\perp y \mid z - \text{trail blocked}$	$x \perp\!\!\!\perp y \mid z - \text{trail blocked}$	$x \not\!\perp y \mid z -  ext{trail active}$
			$x \not\!\perp y \mid desc(z)$ – trail active

**D-separation** —  $X \perp \!\!\!\perp Y \mid Z$  if every trail from  $\forall x \in X$  to  $\forall y \in Y$  is blocked by Z

Note, d-separation is not complete – it may not capture all independencies

Global directed Markov property — All independencies by d-separation.

Local directed Markov property —  $x_i \perp \text{nondesc}(x_i) \setminus parents(x_i) \mid parents(x_i)$ 

**Markov blanket**  $MB(x_i)$  — The minimal set of variables  $MB(x_i)$  that makes  $x_i$  independent from all other variables.

$$x_i \perp X \setminus \{x_i \cup \operatorname{MB}(x_i)\} \mid \operatorname{MB}(x_i) \tag{1}$$

$$MB(x_i) = parents(x_i) \cup children(x_i) \cup \{parents(children(x_i)) \setminus x_i\}$$
